### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

Claims 1-27 are allowable over the prior art of record because the prior art of record does not teach the claimed subject matter including varying the pressure of the reactive species within the sputtering atmosphere to control the sputtering rate of the two component phases of the composite target to cause the ratio of the elements in the two component phases to deposit in a desired ratio as a phosphor film on the substrate.

Claims 28 and 32-42 are allowable over the prior art of record because the prior art of record does teach a composite sputtering target comprising two component phases selected from the group consisting of

- a matrix phase and an inclusion phase;
- two matrix phases;

wherein one of the phases comprises one or more metallic materials selected from the group consisting of aluminum, gallium and indium that contribute to the phosphor composition and the other of the phases comprises one or more non metallic materials that are chemical compounds that contribute to the phosphor composition, the two component phases being non reactive with each other prior to deposition.

Claims 43-55 are allowable over the prior art of record because the prior art of record because the prior art of record does not teach the claimed subject matter including applying sufficient power to the composite target and varying the pressure of the reactive species within the sputtering atmosphere to control the sputtering rate of

the matrix and inclusion phases of the composite target to cause the ratio of elements in the two component phases to deposit in a desired ratio as a phosphor on the substrate.

Claims 56-62 are allowable over the prior art of record because the prior art of record does not teach the claimed subject matter including applying a power density of about 3 to 5 watts per  $\text{cm}^2$  to the composite target and varying the pressure of the reactive species within the sputtering atmosphere to control the sputtering rate of the matrix and inclusion phases of the composite target to cause the ratio of the elements in the two component phases to deposit in a desired ratio as a thin film on the substrate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
